SHEET STRUCTURE

1_Marriage_Records

Explanation

One row per dāu/ddāu transaction. Cross-ref to Sheet 2 via Lineage_Chain_Ref (L-NNN). NEW: Marriage_Type, Incomplete_Flag.

2_Lineage_Records

One row per ancestor chain. Primary genealogical data. Keyed by Lineage_ID (L-NNN). NEW: Generation_Depth.

3_Name_Index

All named persons. With Role, Lineage_Ref, titles. NEW: Name_Type.

4_Village_Index

All villages with frequency, associated ancestors and brides. NEW: Village_Type.

5_Honorifics_Titles

All titles and scholarly epithets with Lineage_Ref.

6_Sections_Summary

Record counts per section including Complete vs Incomplete split.

NEW COLUMNS (v4)

Marriage_Type

primary = first/main dāu; secondary = ddāu (subsequent wife); dāuhitra = granddaughter given; unknown = type unclear

Incomplete_Flag

Y = bride name OR bride village is unknown (...); N = both bride name and village recorded. Enables filtering.

Generation_Depth

Integer: how many suto/suta steps are parsed within this lineage record. 1 = single step; 2+ = multi-generation chain visible in one record.

Name_Type

personal = standard personal name; alias (pro) = name introduced by pro (also known as); epithet = literary/pen name; title+name = honorific title fused with name; compound = two or more names listed together

Village_Type

grāma = single village name; compound = two place names joined (e.g. Sihāuli Māṇḍara, Tripurāuli Narauna, Rajāurā Māṇḍara); unknown = not determinable
